DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 34-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Erb in view of Cohen.

Erb discloses in figures 1-5 a method of inserting the contraceptive device transcervically into an ostium of a fallopian tube (fig. 2) by gripping a handle 26, with a hand, moving the hand, the handle is coupled to the contraceptive device 62 by an elongated body 40, withdrawing the sheath (fig. 5), surrounding the elongated body and a portion of the contraceptive body, detaching the contraceptive device from the elongated within the ostium to inhibit contraceptive, anchoring the contraceptive within the ostium (fig. 2), the deployment shaft includes a core shaft (the shaft inside of 40, fig. 5) and it is a release catheter (used to insert the contraceptive body) and the contraceptive body is detached from the deployment shaft within the ostium to inhibit conception and detaching the contraceptive from the deployment shaft by unthreading (fig. 5). However, Erb doesn't disclose a conductor extending along the sheath and along the first elongated body to provide heating or means for energizing the first

elongated body with radiofrequency energy. Cohen teaches in figures 1-7 a delivery system comprising a conductor 30, extending along a sheath 30 to provide heat. As for claim 23, Cohen teaches in figures 1-2 a means 20 for energizing with radio frequency to provide an electrode path. It would have been obvious to one having ordinary skill in the art at the time that the invention was made that the conductor or the means for energizing could be used to destroy tissue of the fallopian tube to occlude the fallopian tube.

Allowable Subject Matter

Claims 20-33 are allowed.

Response to Arguments

Applicant's arguments filed March 27, 2008 have been fully considered but they are not persuasive. Applicant argues that Erb does disclose a handle mechanism used to release a contraceptive device. However, any location of the device disclosed by Erb can be a handle. Clearly, the device is used to insert a contraceptive. Applicant argues that Cohen doesn't remedy the lack of teaching s of Erb. However, Cohen was used as a modifier to provide a teaching of energizing a deployment shaft with radiofrequency energy before detaching a contraceptive form the shaft.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3772

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL BROWN whose telephone number is (571)272-4972. The examiner can normally be reached on 5:30 am-4:00 pm Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia Bianco can be reached on 571-272-4940. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
